

TorqueTrak TPM2

TORQUE AND POWER MONITORING SYSTEM

Continuous Torque and Power Data from a Rotating Shaft

The TorqueTrak Torque and Power Monitoring System (TPM2) is a rugged precision instrument designed to measure torque and/or power on rotating shafts in real time. The TPM2 uses RS422 full duplex, point-to-point serial interface communication.

FEATURES

- **Easy Installation**
Rotating Collar and Stationary Ring are split and bolt together around the shaft. No machine disassembly or shaft modification is required.
- **Robust Construction**
Sturdy hardware and electronics, built for demanding environments.
- **Reliable Operation**
Inductive power and data transfer with generous clearance between stationary and rotating parts. No wear surfaces.
- **System Status Indicators**
Confirm proper operation at a glance. Expedites troubleshooting.
- **Easy-on Collar**
Rotating Collar is designed to accommodate small variations in shaft diameter and clamps to the shaft using standard tools.
- **Communication Made Easy**
High-speed, bi-directional digital communication link interfaces with PC or PLC. User-selectable sample rate up to 4800 samples/second.
- **Product Support**
Backed by Binsfeld's outstanding customer service, before and after the sale.
